

# **Testing Your DSC Alarm Panel**

## **\*TEST MONTHLY\***

1. Call your monitoring station to inform them you are going to be performing a test.
  - USA Monitoring 1-888-872-3640
  - Tell them you want to put your account on test
  - They'll ask you for your account number (4154601)
  - They'll ask you for your passcode (Wray)
  - Let them know how long you want it on test for
2. Make sure all sensors/zones (doors/windows) are closed and the ready light is on on the keypad. If the ready light is not on you can scroll by using the arrow keys on the keypad to tell you which sensor is open.
3. Arm the system by entering your code and let it arm completely by waiting for the exit delay to elapse.
4. Once it is completely armed go ahead and open each sensor/zone (door/window/motion). Once the entry delay elapses the siren will go off. Let it do so for about 20 seconds.
5. Disarm the system by entering a valid entry code.
6. Call your monitoring station (see step one) and tell them you want to check signals on your account.
7. Ensure that the monitoring station received signals. If not, notify Safe-n-Secure at 1-888-710-7007
